

E60 - Eject box, US

Installation location

The eject box is located in a stowage space in the centre console and has to be retrofitted with the mobile phone on the US version (optional accessory 639).

Construction

Key	Explanation	Key	Explanation
1	Eject button for Motorola Phoenix V60i mobile phone	2	Motorola Phoenix V60i mobile phone
3	Eject box with battery charger for mobile phone battery		

Construction

The eject box is connected to the TCU (Telematic Control Unit) via a plug connector and the wiring harness. The eject box houses:

- Holder for Motorola Phoenix V60i mobile phone
- Battery charger for mobile phone battery
- Aerial connection for telephone aerial 2

How it works

The eject box holds the Motorola Phoenix V60i mobile phone.

Important. Lock the mobile phone in the eject box while you are driving.

This has the following benefits:

- Reduced risk of injury from loose objects inside the vehicle in the event of sharp braking.
- Continual monitoring of the charge level of the lithium ion battery and automatic recharging.

The mobile phone battery is recharged for a certain time when the vehicle is shut down (ignition lock position 0). The charging time is determined and monitored by the TCU (Telematic Control Unit).
